WIRELESS GUARDIAN

The Sun Never Sets On A Northern Air System

Since 1998, Northern Air Systems has been a leading provider of specialized cooling systems worldwide.

Northern Air Systems Overview

Since 1998, Northern Air Systems has been a leading provider of specialized cooling systems worldwide. With thousands of systems in operation today, we have the lowest downtime of any cooling system on the market. Northern Air Systems has developed an integrated cooling system for many different industries, and has been the trusted name for quality and dependability.

Wireless Guardian

Protect your investment and keep your finger on the pulse of your system!

Traditional monitoring of your system used to involve on-site, scheduled inspection of equipment. When equipment failure occurred, onsite personnel would telephone a service company to dispatch a technician to the site for needed maintenance. The notification system could be fraught with delays or a misdiagnosis, increasing costs and downtime. The Wireless Guardian Online Monitoring changes all that. Now notification is rapid, accurate and direct. No need for on site personnel.

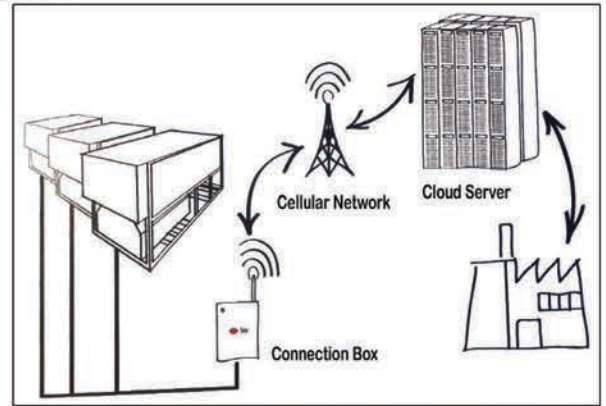

As an online tool, the Wireless Guardian offers a 24 hour overview of your system, from temperature variations to battery life. You can access daily reports from your internet enabled device that include:

- Past 24 hours of activity
- High & low temps
- System run time
- Battery condition
- Signal strength
- Prior unresolved reports
- Real time monitoring of set points & temps
- 2-way communication

The Wireless Guardian offers two levels for service coverage: The Silver Plan and the Gold Plan. Both plans will help you reduce downtime and increase profits. You can identify trends and problems early and take necessary action to avoid failure. You can reduce preventative maintenance cost by making trips only when necessary. Bring together users, systems and applications based on your own specific needs. Online database saves money and puts key info in your hands.

HIGH RELIABILITY

The wireless Guardian provides an online equipment database that helps you analyze the performance and failure rates of your system. With performance comparison information and failure analysis, you can keep tabs on operational efficiencies and trends and make adjustments where necessary.

This powerful database also provides complete warranty data and maintenance history; take pre-emptive measure to assure your system is in peak condition. You avoid downtime and lost revenue as the Wireless Guardian gives you the information you need to make cost saving decisions.
